

SBM 2.0: Why Infrastructure Isn't Enough

Moving from building assets to sustaining habits—the mission-critical role of Behaviour Change Communication (BCC)

Access has been built. Outcomes depend on what 1.3 billion people do next.

Phase I — 'Build It' (2014–2019)

Goal: Eliminate Open Defecation.

Focus: Asset Construction (100 million+ rural toilets built).

KPI: Coverage (Scaled from 39% to 100% declared ODF).

₹2.8 Lakh Crore Outlay

shifting focus from initial access to scientific processing and legacy remediation.

SBM 2.0 — 'Sustain It' (2021–2026)

Goal: Lasting Cleanliness (ODF+ & Garbage-Free Cities).

Focus: Usage, Source Segregation, and Scientific Treatment.

KPI: Verified Outcomes (5.69 lakh ODF+ villages, 3,300+ ODF+ cities).

The identical asset delivers wildly different outcomes depending on human choices. The remaining gains hinge entirely on daily habits.

The 'Software' of SBM 2.0: Defining BCC

Access & Collection

Habit & Source Segregation

National BCC Framework

BCC is the systematic, research-based use of communication to convert a target target achieved into a habit sustained. It is the engine that drives the transition from access to daily use.

Policy Milestone:
Launch of the MoHUA National Behaviour Change Communication Framework for Garbage Free Cities.

"Swachhata is everyone's business." This central belief has metamorphosed a government policy into the world's largest, ongoing behavior change program.

Resource Allocation Panel

- Mass media provides the reach.
- Consistent, local-language **Inter-Personal Communication (IPC)** does the heavy lifting to change habits.

Proof in Practice: 'Swachhata Ki Jyot' Case Studies

Chhattisgarh (Women-Led Tech)

"Swachhata Didis" acting as pillars, managing 3,500+ WhatsApp groups to deliver direct-to-household messaging on home composting and segregation.

Odisha (Institutional Inclusion)

Harnessing grassroots institutions—Mission Shakti Women SHGs, Swachh Sathis, and transgender groups—to drive localized community ownership.

Lonavala (Youth Nudges)

The 'Dry Waste Passbook Scheme' mobilizing 9,000+ students across 23 schools to champion and track household segregation since 2015.

Vijayawada (Workforce Pride)

Empowering 3,700+ SafaiMitras to act as frontline communicators, actively nudging citizens to build 'green communities.'

The Equity Variation

**One national message
does not fit all.**

The 360-Degree BCC Approach

Key Principles Text: Co-Creation: Stakeholders must be on board from the start of the design process. | **Multi-Touchpoint Exposure:** A 360-degree approach raises awareness, changes attitudes, and measurably increases intent to act across diverse populations.

The Action Plan: Treating Behavior as Infrastructure

The Move		Owner	Horizon
Measure use, not just access. Shift KPIs and fund-releases to verified usage and segregation outcomes.		MoHUA / DoWS	Now
Fund and staff IPC. Ring-fence the IEC budget; deploy an incentivized Swachhagrahi per GP/ward.		States / ULBs	0–6 mo
Localize & segment. Drive local-language nudges via SHGs, schools, and community leaders.		States	0–6 mo
Close the loop visibly. Keep segregated waste separated end-to-end so citizen effort is visibly rewarded.		ULBs	0–12 mo
Institutionalize retention. Mandate post-ODF and post-segregation campaigns; do not stop at the declaration.		Districts	Ongoing
Fix the data. Implement standard definitions and independent verification to solve dashboard discrepancies.		MoHUA / CPCB	0–12 mo

The infographic features a light gray grid background. At the top, a blue-bordered box contains the first main heading. Below it, a thin line with several small dots connects to the second main heading, which is enclosed in a rounded orange-bordered box. The third main heading is at the bottom, surrounded by a complex network of orange lines and dots. The text is in various colors: blue, orange, and dark gray.

Infrastructure got India to access.

12.14 crore rural toilets and near-universal urban collection are a genuine achievement. But they are the starting line, not the finish line.

Behavior turns access into outcomes.

Usage, source-segregation, and sustained upkeep are human choices. BCC is the proven engine for changing them at scale.

Treat behavior as infrastructure.

Fund it, staff it, and measure it with the same rigor as concrete and steel.

The next leap in SBM 2.0 will be won house-to-house, not only site-to-site.
